

Form Position Saving

IQX has a facility from version 2.2.9.14 onwards where a form will remember a fixed position to open at, rather than move cascade positioning down the screen.

It has to be switched on in General Settings, then activated and finally the forms set.

To activate click on the IQX symbol on the left hand of the header bar of any form, and click on Save Position. Then exit and restart IQX.

The position will not have been remembered yet but the system is activated.

When IQX has restarted open a form and move it to the desired position e.g. The Desk Top to the right of the screen to make it easy to drag from Inbox onto a record.

Click the symbol again and Save Position.

Now if you close and reopen the screen it will be in the saved position and size.

The screenshot displays the iqx software interface. At the top, there is a navigation bar with icons and labels for 'People', 'Vacancies', 'Temp Desk', 'Make Contact Event', 'Make Appointment', 'Make Reminder', and 'Prog'. Below this is a 'Link Top' section. The main area is a calendar grid with a sidebar on the left. The sidebar contains links for 'Primary', 'Primary List', 'Inbox', 'Events due for action', 'Contact Events', 'Callback', 'Vacancies', 'Authorised members', and 'Reports'. The calendar grid shows a list of times from 8 AM to 3 PM, with each time slot having a corresponding row for scheduling. The bottom of the screenshot features the iqx logo.

This is especially useful where you interact between screens such as dragging from Inbox or Timesheet Image linking.
