Compliance Domains

Compliance domains provide a structured mechanism for monitoring the compliance status and suitability of candidates based on their Questionnaire responses (both global and departmental).

They can also be easily fitted into the validation mechanism so that relevant errors and warnings appear without the need for fiddly custom programming in the validation functions.

A validation domain can be either global or linked to a department. There can be multiple domains per department to cope with different skill sets and compliance criteria. A compliance domain can also link to others, both conditionally based on the answer to a question or unconditionally. This removes the need for repetition of general requirements and allows for easy specification of complex or hierarchical requirements.

Definition

The **Compliance Domains** option is available on the **Compliance** menu and the **Agency** and **Temp** Maintenance menus.

Setting up a domain is a simple matter of selecting the relevant questions and marking them as *Required*, *Warning* or *Score Only*. On the various Compliance views, failure of required questions will display in red, warning questions orange and successes green. If a question is Score Only it will only contribute to the percentage score which can be used to order candidates.

For any questions with sub-choices you can specify a required sub-choice or allow Any (i.e. at least one must be selected).

Date questions will also police Expiry, based on the settings in the question itself for Expiry Lead and Expiry Behaviour.

Numeric, scored and graded questions will additionally support a minimum value. This should be left at 1 for all non-numeric questions.
