

iqxWEB Version 1.4.0 Release Notes

Due to the significant changes introduced in iqxWEB v1.4.0, it is necessary when updating to this version to follow the How to Update to iqxWEB 1.4 guide.

Requirements

Minimum **IQX.exe** Version: 2.19.2.x

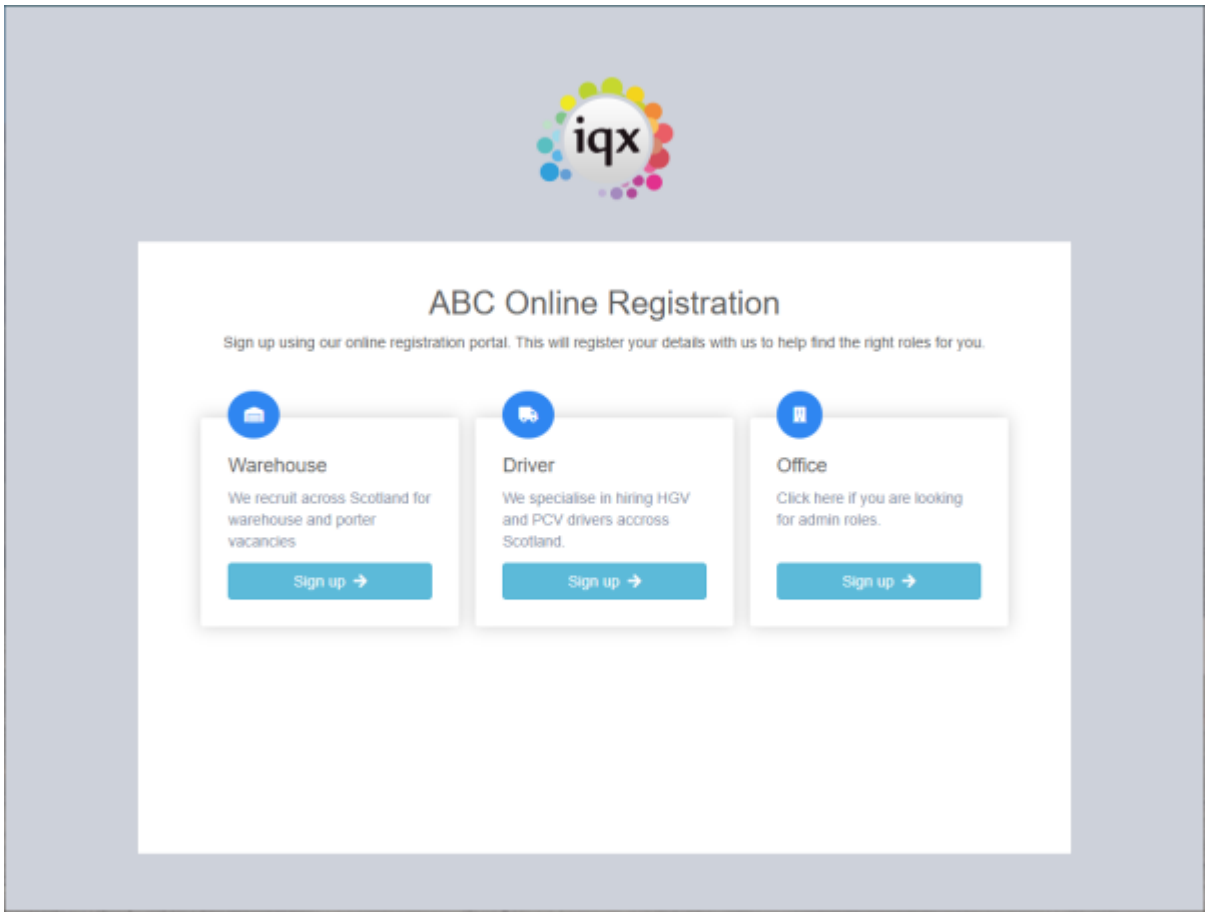

Minimum **IQX WPK** Version: 2.19.2.8

Features

Soft Registration Wizard

New **fully customisable** registration wizard.

For documentation see registrationwizard.

Lazy Loading and Performance Improvements

Our tests show taht iqxWEB 1.4.0 is now up to **10 times faster** than previous versions of iqxWEB.

This massive performance improvement has been achieved by:

- Loading large resources only when they are required.
- HTTP2 Support.
- Removal of duplicated/unused code.
- Optimisation of code.

Configuration can now be managed in IQX.exe

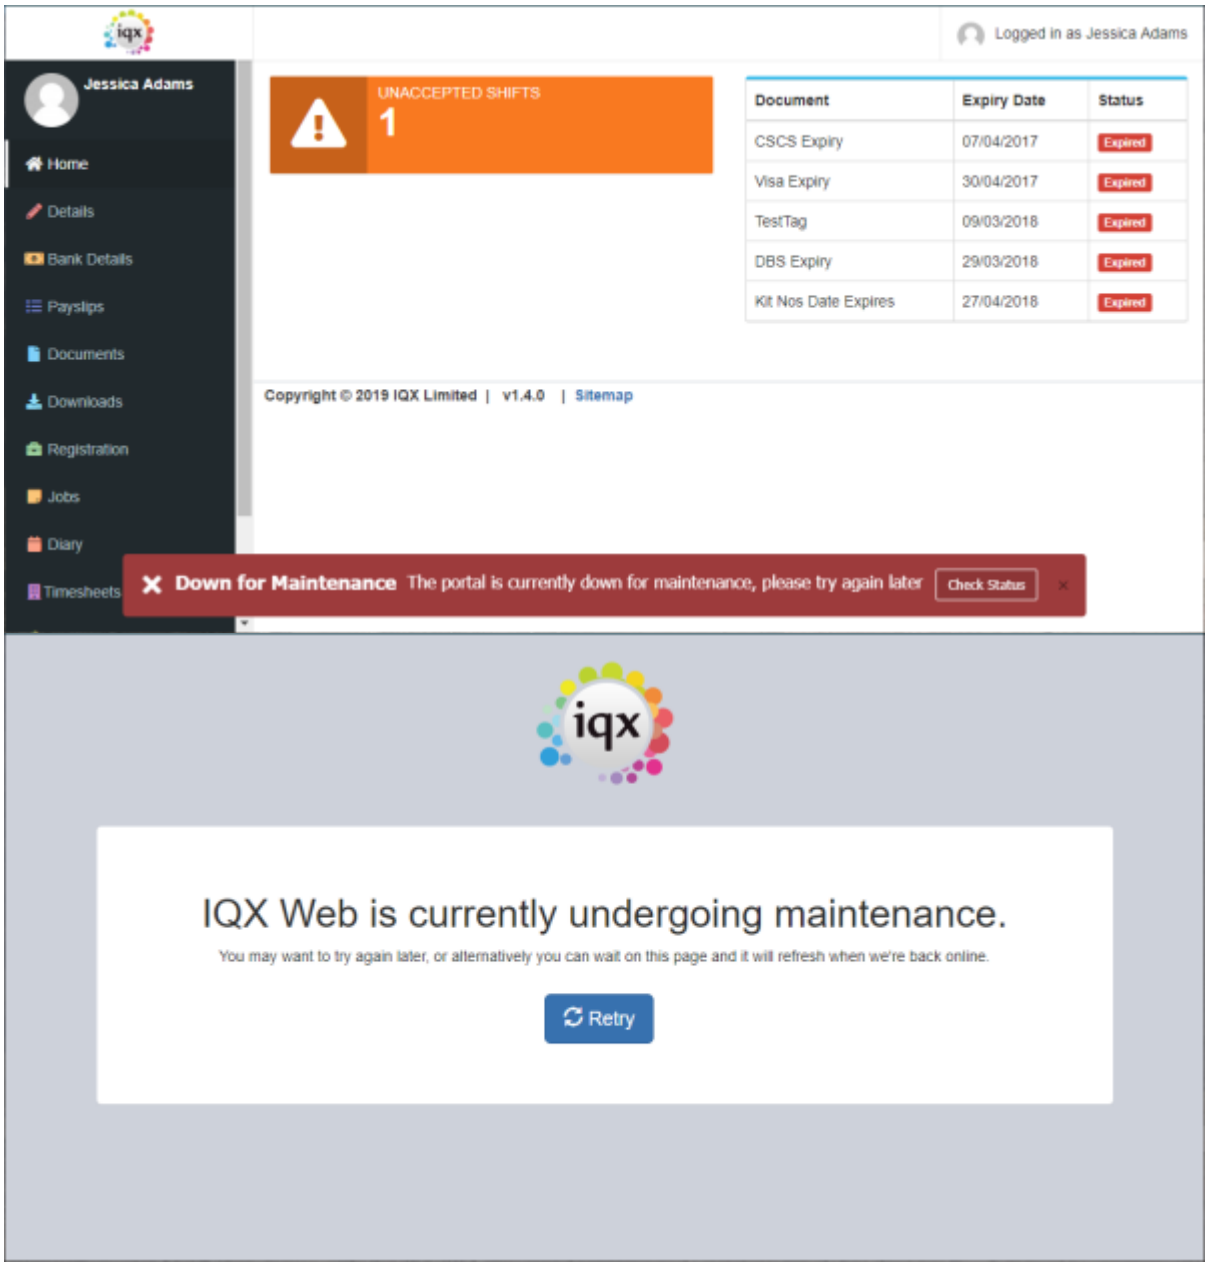

The configuration inside config.js and config-browser can now be edited from IQX.

For documentation see Configuration

Maintenance Mode

The iqxWEB portal can now be put into maintenance mode. This will display a notification to users on the portal and redirects anyone else who tries to access the portal to a splash screen.

For documentation see How to use Maintenance Mode.

Enhancements

- Candidate > Bank Details - when adding the IQX setting for Tax Method default is use to fill pay_employee details.
- Client > Current Requirements > Add Shifts - clone row button now disabled if row is not valid instead of showing error message when button is clicked.
- Updated terminology on current timesheets. Heading “Client” replaced with “Company” as this makes more sense.

- Updated terminology on current timesheets. Heading “Gross Pay” replaced with “Total” as this makes more sense.
- Updated address formatting on all timesheets views.
- Added a Cookies and Web Tracking popup at the bottom of the login screen.
- Contract Shifts can now be duplicated on Current Timesheet
- Client current requirements, list of shifts added this session.
- Client previous temps, status column can now be hidden with a switch.
- Added total hours and total charge column to Client > Timesheets for Authorisation.
- Added option to discard edits when navigating away from a form which is in edit mode.
- Removed extra padding so that more of the screen space is used on mobile.
- Password reset page no longer returns error if email is not found to increase security.
- Updated analytics checkbox styling.
- Spelling errors rectified.
- Added no results messages.
- Favourites page styling updated.
- Owner diary add event dialogue now fills screen.

Bug Fixes

- Refresh icon not rendering on client current requirements.
- Icons overlap on candidate current timesheets page.
- Clicking duplicate on a row without a date in client > current requirements > add shifts creates a row with the date set as the current date.
- Hover effect on table rows in client current requirements, but you can't click on them.
- Timesheet date formatting.
- Client > Current Requirements position field will display “, ,” if tempshiftplan is left empty.
- Added Missing procedure to Non-Authenticated Procedures list.
- Internal error displayed if user who is already registered try to use registration wizard.
- Contract temp vacancies now show in client current requirements.
- On mobile if you open/close sidebar menu the icon to toggle it remains focused making it look greyed out.
- Auto rotate does not work on mobile if web app has been added to home screen.
- Bug/feedback reporter text area covered by on screen keyboard.
- Client Current Requirements Procedure - correct identification of contract or shift.
- Logout menu overlay does not cover nav menu.
- client previous temps number per page does not display properly on mobile.
- Timesheet image upload error.
