Notifications - Deep Links

Story: I want to send a list of vacancies or shifts to a candidate via notifications and the notification should contain a deep link that when they click on it it opens a web page to say that they have been added to the shortlist, update their progress status on the vacancy shortlist, add them to the shift shortlist and log a contact event.

There are a number of elements that need to be in place, expand the sections below for details on what needs to be set up.

Shortlist/Progress States

Suitable shortlist states need to be set up in Maintenance - Agency Setup - Progress States and if you are sending shift details Maintenance - Temps Setup - Shift Progress States.

Hub

IQXHub must be active and the RunJob Schedule Group and RunJob UserID should be set, the UserId is used as the consultant linked to the Progress and Shift Progress

Elements for the Notification

Boiler Plate Text - If you want to send individual lines for each shift then you will need a Boiler Plate Text item set up called SHIFTLINES with a type of Notification. It is HTML code and will refer to a Custom Merge Field. Only required for sending shift lines.

literal<tr><td>{SHF_DATE}</td><td>{SHF_FROM}</td> <td>{SHF_TO} </td><td> Accept Booking<u><<</u></td></tr>

The example should be amended so that 'localhost:54000' is changed to the address of the hub that will run the job and 'public_670.xml' is changed to the name of the job that is being run.
