Configuring single sign-on / Active Directory integration

Introduction

It is now possible to log into IQX using Active Directory authentication. Provided a user has the required permissions and security setup, clicking on the IQX icon will log the user straight in to IQX without having to complete the login box.

Where the user does not have rights to use an integrated log in or there is an error with the Active Directory setup, the user will be presented with standard login dialog box.

To Configure in IQX

To set up IQX to permit silent login enter the required domain information into General settings – Security settings 20 and 25.

To Configure in Active Directory

Active Directory setup will require System Administrator/IT department set up.
