

# Notifications

The Notification system provides a mechanism for providing standard templates for HTML emails or SMS texts for users to communicate with clients, candidates and secondary agencies for key events relating to vacancies, placements and shifts rather than creating contact events and writing each one every time.

This is achieved by the creation of Notifications which contain HTML text, substitutable merge fields (similar to the merge fields in the IQX MS Word mechanism) and can have standard attachments linked and also create Outlook Appointments for those involved.

The creation of a template is all that is required to 'switch on' each notification mechanism. In some cases a Notification will appear automatically, in others they are called by the Notification Icon, as seen below.

## Where notifications can be sent from

- Person Selector
- Person record main page
- Documents tab on person record
- Vacancy Shortlist
- Interview tab on Desktop
- Progress due for action tab on Desktop
- Placement
- Querying Shifts
- Booking Shifts
- Confirming Shifts

## Required Settings

- General Settings, Settings 3280 Filter Documents for Document Pack Sending = 0
- General Settings, Layout 3020 Show Alternative Send Docs View = Y
- General Settings, Settings 86 Allowed Progress States for Doc Pack = Progress state codes need to be entered where you are happy to have doc packs sent from
- General Settings, Temps 441 Notification Contact Event Type Code = enter the code needed, this can be overridden using the Function found on Notifications
- General Settings, Settings 85 Allowed SHIFT Progress States for Doc Pack = SHIFT progress state required to be set up

## Setting up a notification

Maintenance - Database Set Up - Notifications

*Columns in Notification View*

**ID** - Unique ID used for the notification

**Description** - Of notification. This automatically populates the email subject, but can be overridden from the function.

**Transmission type** - Email or SMS text

**Notification type** - Where the notification is sent from for example, from Vacancy Shortlist you need to have a type of ProgressCodeA where the letter at the end matches the progress code in Agency Set Up.

Available Notification Types:

- NotifyConfirm - available from the confirm shifts button
- NotifyCancel - available from the confirm shifts button
- QueryConfirm - available from the confirm shifts send query button
- QueryBook - available from the fill shifts wizard SMS/Email button
- ProgressCode## - available from the shortlist. The ## should be replaced with the progress code for that particular progress state.
- FillShiftPack - available from the fill shifts wizard Send Docs button
- ClientContact - available from the notifications button when a client contact has been selected
- DiaryReminder - available when sending a diary invite to a candidate or contact
- ReferenceRequest - available when sending we references
- PersonShiftPack - available from Person record shifts view Send Docs button
- PersonContact - available from the person record
- PlacementConfirm - available from the placement record

**Recipient Type** - Candidate, Client or Agency (Person Selector and Record can only use Candidate type as no links to others)

**Template** - The body of text for the notification. This will be HTML for emails and plain text for SMS.

**Sort order** - The first template (lowest sort order) of any given type will be used as the default. If more than one template shares the lowest sort order, all with that sort order will be displayed in separate forms. This allows for both SMS and Email notifications to be sent at the same time.

**Group code** - Can be used for identifying templates for a particular division, for example, and incorporated into the Template Selector function for multi-brand organisations

**Division** - Can be used to limit the templates to a particular division. Users not in this division will not see the template.

**Defunct** - If ticked the template will not appear for selection. Useful for old or partly written

templates.

## How to set up

**Below example:** *This will be a notification sent to a candidate with details of their first interview at a company. It will only be sent when the candidate is in Progress Code C – which is Invite to first interview; this information can be found in Maintenance – Agency Set Up – Progress States*

The next screen is where you input your notification template. Insert field/question will pull through specific information relating to whatever the merge field is ie {APP\_NAME} will pull through applicants' name. The Preview Template is useful to see how your template is looking as you work on it. Hit save and close once you are happy.

## Adding an attachment

Adding an attachment to a notification is optional and is done via Database Functions as pictured below.

It allows specification of a comma-separated list of attachments, either files or documents attached to records. Example: Company: \*,C:\docs\toc.pdf,Report: details.rtm,CV which would attach all company documents, one static file, one dynamically generated report and the CV. Report templates must be located in the normal default report folder or specified by full pathname, they will receive the following parameters in order: PersonID, CompanyID, VacancyID, PlacementID, Agency CompanyID and will be attached to the email as a pdf.

**For report directories and attachments, it is necessary to ensure the right type of file directory format is used. UNC pathways cannot be used in notifications currently, so the correct mapped drive path must be used**
