Temps Setup

Payroll Years

For Temp Year and Week numbers to appear in the Temp Desk they must be set up. There are restrictions according to what back office is connected. The Years are numbered by the year at the start of the financial year. e.g. 6/4/2004 to 5/4/2005 is called 2004. This can be changed if another method is preferred. If a candidate works in week A they will actually be paid in the next week in week B. The decision has to be made whether to link the IQX week number with the payroll week number. If yes, then in IQX call the last week of the financial year (including 5th April) Week 1 and it will correspond with the payroll week 1. If the Week 1 ends on a Sunday the days will be presented in the Temp Desks as Monday to Sunday. To present the days in a different order make the Week 1 end on what is your last day of a week. (Not available with LSM Back Office)

Temp Desks

Temp Setups > Temp Desks

The Temp Desk system is a way to arrange work for the convenience of individual consultants. They can get at active Temp Vacancies for filling, processing and completing time sheets, in the time frame of a week or a month.

There are two ways of organising Temp vacancies; by contracts or by shifts.
Contracts: here the skills are of primary importance and the time frame is likely to be continuous. The vacancy is displayed as needing work until all positions are filled. Placements are made for each candidate filling a position. Timesheets are generated from the placement.
Shifts: Where time matching is of primary importance and there can be varying times for each day. The vacancy is displayed with the shifts entered for each day, either unfilled or with the candidate linked. Timesheets are generated from the shifts, with placements retrospectively created from the timesheets.

You can create as many Temp Desks as you require to fulfil your business requirements

- Each Temp Desk is attached to a Department for skills matching.
- Each Temp Desk is attached to a Division for viewing access.
- Each Temp Vacancy is attached to a Temp Desk

Applicants can be attached to several Temp Desks to make groups of skills easy to search.

Consultants can work with any Temp Desk but should have a primary attachment to one. Temp Desks can be seen in Monthly or Weekly views. For example, if you have 4 consultants all working in one department you could have:

- One Temp Desk that all consultants work in together, any consultant working on any job.
- A Temp Desk for each consultant, where they bring in their own vacancies and match their own candidates
- A combination of the above, depending on agency working methods.

For initial configuration consider how your consultants work – individually or in teams – and list the potential Temp Desks that will be needed. The IQX installer will also be able to advise.

To create a Temp Desk

For each Temp Desk you need to add the following:

- **Name** - Enter an appropriate name for the grouping.
- **Default View** - Select the view from:
    - **Monthly Contract** which displays by vacancy a month at a time,
    - **Weekly Contract** which displays by vacancy a week at a time,
    - **Weekly Shift** which displays by shift states a week at a time.
- **Department** - Selects the department.
- **Division** - Selects the division.
- **Current Year** - Enter the code for the current Temp Year. This should correspond with a year in the Temp Years table.
- **Current Week/Month** - Enter the year and month number. This will set the first 'Current Date' setting.
- **Default Payroll Company** - Enter as appropriate for your back office. For LSM Back Office enter A.
- **Default Analysis Code** - Available if required for extra report functionality.
- **Timesheet Period** - Weekly or monthly.
- **Default check timesheets** - Alters the behaviour of the Vacancies tab: colours reflect whether placements or timesheets are completed for the vacancy.
- **Extra Codes** - Available if required for extra report functionality.

Pay Bands

The parameters for each type of pay unit must be set. They are used in specially defined Rate Schemes for Departments or Clients but can be set to appear by default on the Vacancy Rate Tab. To add a Temp Pay Band:

- Description - Will be carried through to payslips and invoices
- Unit- Hour, Day or Week (as in Holiday Pay)

- Payroll Flag - Varies according to back office system. The installer will advise.
- Appears by default - If ticked, will appear empty for each vacancy
- Holiday Pay - Is treated as Holiday Pay and decreases the entitlement
- Include in Holiday Pay - Counts towards the rate of pay in Holiday Pay Calculation entitlement
  ALL PAY USING A PAY BAND WHICH IS TICKED TO BE INCLUDED IN HOLIDAY PAY CALCULATION ENTITLEMENT WILL ACCRUE HOLIDAY TAKE CARE WHEN SELECTING WHICH PAYBAND IS USED
- Sort Order - Controls the display of lines
- LSM Exclude from Total - The units associated with this pay band are NOT added to total units in LSM, as in where a second line for extra payments per hour is used.

Temp Rate Scripts

Temp rate scripts allow IQX to automatically convert the time of worked shifts into the pay and charge values on timesheets by processing individual shifts into pay bands. Both simple and very complex rules can be accommodated. Each Rate scheme can have an associated rate script. Multiple Rate Schemes can share the same rate script. For detailed help with Rate Scripts see Temp Rate Scripts.

Temp Rate Schemes

Default Rate schemes for the Agency and Clients are set up in Maintenance but can later be edited as required for each Vacancy. In the Vacancy the scheme will be selected from the Description.

- To limit a scheme to be visible only for a Department select the Department from the drop down box.
- To limit a scheme to be visible only for Clients with the same Charge Code (entered in the Company-Miscellaneous Tab in the Temp Charge Code field) enter that Charge Code here.
- To get a best guess calculation for Employer NI contributions and for Holiday allowances enter a percent e.g.10% and 8%. This is to help estimate the cost of a Temp for setting Charge Rates. It can only be an estimate.
- Enter the Pay Rates and Charge Rates in the Pay Bands appropriate for the scheme. Extra Bands can always be added.

From version 2.18.8 the Rate Scheme Calculator can be used to help with maintaining rate schemes.

Holidays

Maintains the holiday dates used when processing Temp Rate Scripts.

If the Branch and Client Code are left blank the holiday applies to everyone.

The Client Code is referenced by Temp Holiday Code on the Temp Details page of the company form. If the company's Temp Holiday Code is blank then any holidays with a Client Code of 'DEFAULT' will be

used (in addition to those with blank Client Codes).

Shift Types

The different types of shifts used by the Agency can be set here e.g. Early Day, Day, Night and these can then be used in the shift template and picked up by the rate scripts for use in calculating the timesheet.

Shift Templates

Shift Templates need to be defined before shifts can be used. The minimum required is a Description, Times or Duration and whether moveable. Shift Templates can be predefined for a department, client or be global. They can have skills requirements set and time frames, a reference and confirmations required.

- Description - Viewed in the list
- Client Shift Code - Enter if to be used for one client/set of clients only
- Department - Enter to restrict to use by that department
- Skill Section- This does not have to be used! However, if you know there is one Essential Skill that MUST be met you can set it here so that it is never forgotten.
- Skill Questionnaire - Select General or Department from the drop down box
- Skill Question ID - Enter the ID of the skill
- Skill Choice - Can have a Choice ID, % which will match if any choice exists, or leave blank so that a list of the choices is given each time.
- Skill Grade Question ID - This can be used in addition to the Skill Question if your criteria is set up to have grading in a different question. If the initial Skill question is a graded question, leave it blank.
- Skill Grade ID - Can refer to either question and be set to an ID, % or blank.
- Time From and To - Enter the start time and finish of the shift, if the times are regular
- Minutes Required - Is for where times are not regular and you might start at variable times, but be for a standard duration. Then leave Time From and To empty
- Break - For the Timesheet to deduct break time enter the minutes to be deducted here.
- Moveable - Tick to allow manual adjustment of the times in a vacancy
- Reference Req. - Select from the choice of On First Entry, Not Required, On Timesheet Entry or On Confirmation
- Must Confirm - If the shift is to be provisional until the client and/or candidate has given confirmation, tick the box. The shifts will be framed in blue until fully confirmed.
- Shift Type - Is for use with Rate Scripts
- Analysis Code - Is for use with exceptional reporting requirements

Guidance from LSM Logic is required if complex shift timesheeting is to be used.

Shift Template Groups

WORK IN PROGRESS
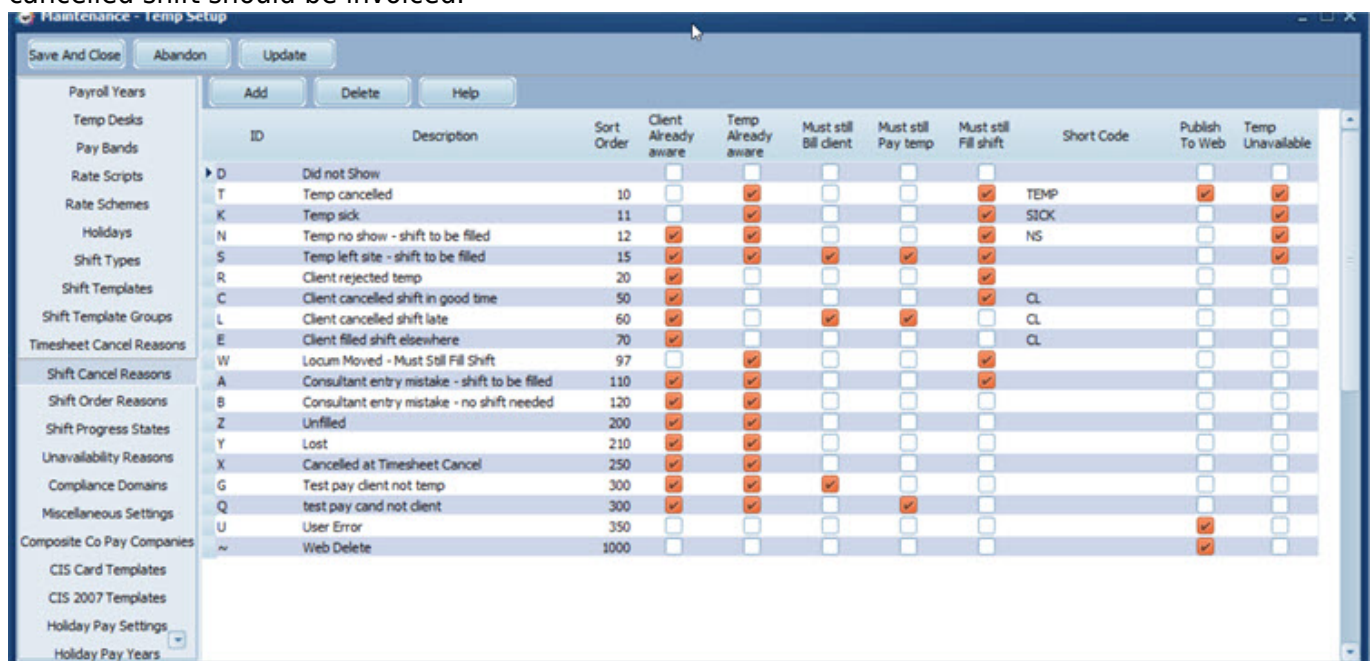

Timesheet Cancel Reasons

The Agency can set up a number of timesheet cancel reasons here that a user must select from when completing the cancel/correct procedure.

Shift Cancel Reasons

Cancellation Reasons control who is to be notified of a cancellation, if rebooking is required and if a cancelled shift should be invoiced.
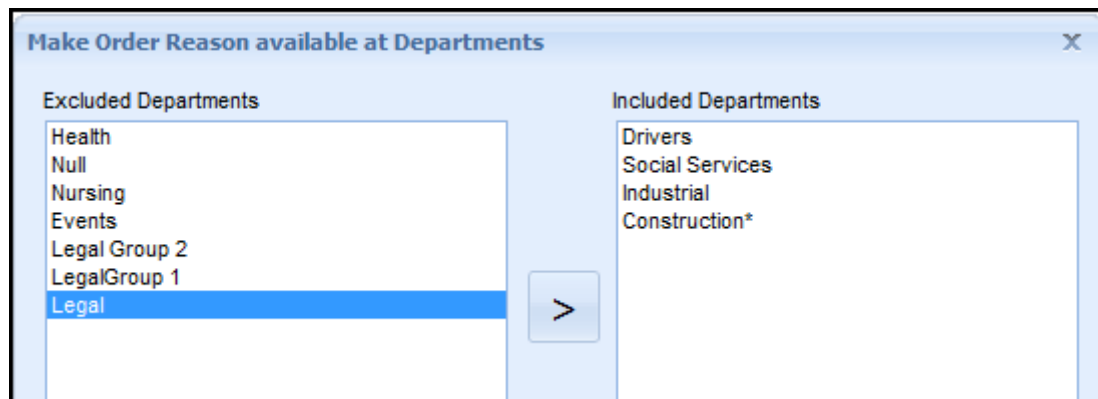

ID	Description	Sort Order	Client Already aware	Temp Already aware	Must still Bill client	Must still Pay temp	Must still Fill shift	Short Code	Publish To Web	Temp Unavailable
D	Did not Show									
T	Temp cancelled	10		✔			✔	TEMP	✔	✔
K	Temp sick	11		✔			✔	SICK		✔
N	Temp no show - shift to be filled	12	✔	✔			✔	NS		✔
S	Temp left site - shift to be filled	15	✔	✔	✔	✔	✔			✔
R	Client rejected temp	20	✔				✔			
C	Client cancelled shift in good time	50	✔				✔	CL		
L	Client cancelled shift late	60	✔		✔	✔		CL		
E	Client filled shift elsewhere	70	✔					CL		
W	Locum Moved - Must Still Fill Shift	97		✔			✔			
A	Consultant entry mistake - shift to be filled	110	✔	✔			✔			
B	Consultant entry mistake - no shift needed	120	✔	✔						
Z	Unfilled	200	✔	✔						
Y	Lost	210	✔	✔						
X	Cancelled at Timesheet Cancel	250	✔	✔						
G	Test pay client not temp	300	✔	✔	✔					
Q	test pay cand not client	300	✔	✔		✔				
U	User Error	350							✔	
~	Web Delete	1000							✔	

Shift Order Reasons

Shift Order Reasons allow for the recording of the reason that a shift was ordered by the client.

Shift order reasons can be targeted at a departmental level, but by default are available to all departments. To allocate a particular Reason to one or more Departments, select the order reason and click Department.

Shift Progress States

Unavailability Reasons

Candidates can have periods of time blocked out of their diary as unavailable. Specific reasons can be set up here such as sick, jury duty, rest days so users can easily identify why a candidate is not available for work.

Compliance Domains

Compliance domains provide a structured mechanism for monitoring the compliance status and suitability of candidates based on their Questionnaire responses (both global and departmental).

They can also be easily fitted into the validation mechanism so that relevant errors and warnings appear without the need for fiddly custom programming in the validation functions.

A validation domain can be either global or linked to a department. There can be multiple domains per department to cope with different skill sets and compliance criteria. A compliance domain can also link to others, either conditionally, based on the answer to a question, or unconditionally. This removes the need for repetition of general requirements and allows for easy specification of complex or hierarchical requirements.

Miscellaneous Settings

- Set default numberings for Payroll Numbers and Timesheets.
- Set default shift times –used by availability and shifts

- Set PAYE defaults – Tax Code, NI Letter and Week 1
- Set Payroll and behaviour
- Set how Holiday Pay dates behave.

Composite Co Pay Companies

Set up the Composite Payroll Companies that can be used by the Agency. Each element can be set to be included or excluded using the arrows. Once the necessary fields have been selected press Next to enter the details for the company.

Any changes to an existing Template will be sent through to all candidates with that Template selected.

This view can also be used to review existing Composite Payroll Companies and getting a list of candidates linked to the company.

CIS Card Templates

Set up the CIS Card Templates that can be used by the Agency

CIS 2007 Templates

Holiday Pay Settings

The default holiday pay settings for the Agency are set here including how many weeks holiday a candidate is entitled to, when the holiday year starts and whether unclaimed hours are carried forward or cleared down at the end of the holiday pay year.

Further information can be found at Setting up Holiday Pay in IQX

Holiday Pay Years

To ensure end of year holiday pay is processed in the week when the Year end is partway through a

week the holiday pay years should be set up here detailing the last week a candidate can earn holiday and the first week they will be paid.

Secondary Agencies

For Agencies that work with Secondary Agencies in relation to the provision of candidates these can be set up and managed here. For more information on how to set up a Secondary Agency see Secondary Agencies.

Secondary Agency Applicant States

To differentiate between Secondary Agency Candidates that are checked and ready to work and those that are still to be confirmed as ready to work different states can be assigned to them in the same way as standard candidates.

Notifications

The Notification system provides a mechanism for clients, candidates and secondary agencies to be notified of key events relating to vacancies, placements and shifts, by means of HTML email or SMS text.

This is achieved by the creation of message templates which contain substitutable merge fields similar to the merge fields in the IQX MS Word mechanism.

The creation of a template is all that is required to 'switch on' each notification mechanism.

For full details see Notifications

External Price List

To ensure end of year holiday pay is processed in correct week when the Year end is partway through

a week.

Payroll Companies

Timesheet Query Reasons

Timesheet Query Reasons allow Timesheet Queries to be classified into different types. The Code allows control over which users have the ability to choose which codes; so, for example, different reasons can be allocated to front and back office users. Codes are allocated to users, on the User's configuration screen.

Availability Templates

To help users add candidate availability quickly for specific times templates can be set up which can be picked from a drop down. Also available for use on IQXWeb.

Master Rosta Change Reasons

Config Log

The Configuration log provides an area where details and reasons for configuration changes can be recorded.
